#### **Nevada Science Standards**

#### Introduction

Science is the component of the school curriculum in which student inquiry and discovery can develop and flourish. Science seeks to make sense of the natural world by describing its complexity, explaining its systems and events, and finding patterns that allow for predictions. It is the basis for the design of technologies that solve real-world problems and occupies an increasingly important place in our everyday lives. As citizens, we are asked to make decisions about social issues that involve science and technology. As workers, we have occupations that increasingly involve science and technology. In the twenty-first century, adults will need to be comfortable and competent in a complex scientific and technological world. Schools have the responsibility of preparing students for the future. Schools must prepare all students to be scientifically literate.

The study of science involves exploration using a variety of technologies. Current technology tools for communication, research, problem solving, and decision making provide students with opportunities to apply scientific concepts in project-based activities. Use of video, the Internet, and other print and non-print sources enhances students' learning experiences and helps make those experiences meaningful.

The *Nevada Science Standards* represent a common core for curriculum throughout Nevada's schools. Many people may recognize, however, that as in many human endeavors the process is at least as important as the product. These content standards are the result of an invaluable process of dialogue and consensus-building among educators, scientists, industry representatives, and parents from throughout Nevada about what all students should know and be able to do in science. The content standards are essential to accomplishing the goals for science education listed below.

#### Goals of Science Education in Nevada

All graduates of Nevada schools should:

- Demonstrate the processes of science by posing questions and investigating phenomena through language, methods, and instruments of science;
- Acquire scientific knowledge by applying concepts, theories, principles, and laws from life, physical, and Earth/space science;
- Demonstrate ways of thinking and acting inherent in the practice of science and exhibit an awareness of the historical and cultural contribution to the enterprise of science; and
- Demonstrate an ability to solve problems and make personal decisions about issues affecting the individual, society, and the environment.

#### **Content Organization**

All of the sciences connect with each other. However, it has been necessary, for ease of use, to divide this document into an ordered hierarchy. This organizational scheme should in no way be interpreted as a mandate for structuring academic courses or curriculum.

The complete domain of what students should know and be able to do is organized in this document as six strands: physical science; life science; earth and space sciences; environmental sciences; the nature and history of science; and scientific inquiry: processes and skills. Each of the six strands is further divided into content standards which constitute the "big ideas" of science. For example, Physical Science is divided into five content standards, beginning with Forces and Motion. Specific grade-level benchmarks further define student expectations relative to this content standard. These benchmarks are specific enough to provide a common content core for local curriculum but broad enough to allow school districts many diverse curricular paths to meet the standards. The order in which concepts are listed from top to bottom on any given page is not meant to imply an order in which concepts should be taught. Curriculum designers and teachers are encouraged to build units of study that address standards from multiple strands, to emphasize interdisciplinary study.

Knowledge and processes are both important in the area of science. It is even more important that students be able to combine their scientific knowledge and the processes of science to develop their own understanding of science. For example, students should be encouraged to engage in such activities as asking questions, planning and conducting their own investigations, and using tools and technology to gather data. Therefore, the *Nevada Science Standards* frequently use verb combinations to describe what a student is expected to know and be able to do. For example, at the third grade, students are expected to "investigate and describe the ways that different objects may balance or topple in various situations." The *Nevada Science Standards* are intended to provide Nevada students with a rich, thorough, and varied science education to prepare them for the challenges, discoveries, and demands of life in the twenty-first century.

This edition of the Nevada Science Standards contains supplemental information not previously included in previous editions. First, suggested interdisciplinary links have been noted at the bottom of each box, when applicable, for grades 2, 3, 5, 8 and 12. Second, for the Benchmark Grades of 2, 3, 5, 8 and 12, each of the benchmark standards were prioritized based on a three-part framework which included Enduring Knowledge, Important Knowledge and Knowledge Worth Being Familiar With. In addition, for each of the benchmark standards in grades 5, 8, and 12, a determination was made as to whether the standard would be assessed locally by school district personnel or through a state assessment. In doing so, it was assumed that all standards would be assessed at the local level but that only some of the standards are appropriate for assessment at the state level. Listed below are the keys to the coding used throughout the document regarding interdisciplinary links by subject area, prioritization framework and assessment level.

#### KEY TO INTERDISCIPLINARY LINKS

(Located at the bottom of each box, as applicable, for Grades 2, 3, 5, 8, and 12)

C = Civics E = English Language Arts Ec = Economics G = Geography

H = History M = Mathematics S = Science

#### KEY TO PRIORITY FRAMEWORK AND ASSESSMENT LEVEL

- E = Enduring. Complex, engaging, "big ideas," will require more in-depth knowledge.
- I = Important to know and do. Students should retain detailed but not extensive knowledge.
- W = Worth being familiar with. Students should have awareness of key people, ideas, concepts, and terms.
- L = Nevada Academic Standards that are assessable at the local level ONLY.
- S = Nevada Academic Standards that are assessable at the state and local levels.

The coding for both the priority framework and the assessment level are located at the top, right hand corner of each box. Priority framework coding is provided for Grades 2, 3, 5, 8, and 12. Assessment level coding is provided for Grades 5, 8, and 12 only. As an example, the letters E/L found at the top right hand corner of a 5th grade benchmark standard would indicate that the standard requires Enduring knowledge and will only be assessed at the local level.

# **Physical Science**

Content Standard 1.0: Forces and Motion—Students understand that forces such as gravitational, electrical, and magnetic influence the motion of objects.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
1.K.1 Investigate and describe how objects move.		1.2.1 Observe and describe objects moving at different speeds.	1.3.1 Apply unbalanced forces¹ (a push or pull) to cause objects to change their motion (e.g., speed, direction or both).		Description of Motion
			I 1.3.2 Investigate and describe the ways that different objects may balance or topple in various situations.	1.4.2 Investigate and describe balance points of different objects.	Gravity
		I 1.2.3 Assemble, take apart, and reassemble constructions using interlocking blocks, erector sets, and the like.	1.3.3 Manipulate hammers and nails, screwdrivers and screws, scissors, and other simple tools.		Machines

**Force** – Any push or a pull

<sup>-</sup>

<sup>&</sup>lt;sup>1</sup> Words in bold text are defined at the bottom of each page. Nevada Science Standards, Adopted March 1998, September 1, 2001 Edition

#### **Content Standard 1.0: Forces and Motion**

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
K.4. 1 Observe and describe how objects behave when placed in water.				1.4.4 Investigate and describe how objects can sink or float in water.	Pressure, Density, and Buoyancy
	1.1.5 Observe and describe how magnets can be used to make objects move without being touched.				Electrical and Magnetic Forces

# **Physical Science**

Content Standard 2.0: Structure and Properties of Matter—Students understand that materials have distinct properties which depend on the amount of matter present, its chemical composition, and structure.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		E 2.2.1 Describe objects in terms of their observable properties <sup>2</sup> (e.g., state of matter, size, shape, color, texture). M 3.2.1; M 3.2.2; M 4.2.1	E 2.3.1 Describe objects in terms of their observable properties (e.g., state of matter, size, shape, color, texture). M 4.3.1; M 4.3.4	2.4.1 Investigate and describe properties of materials when they are combined (mixtures).	Physical Properties
			E 2.3.2 Sort and classify objects according to observable properties (e.g., size, weight, shape, color). M 4.3.4		Chemical Analysis
		W 2.2.3 Put small objects together to form bigger objects.			Chemical Bonding
					Atomic Theory

**Properties** – Characteristics unique to a set of particular living or non-living things. (see 6.2).

<sup>&</sup>lt;sup>2</sup> This topic is taught in subsequent grades.

# **Content Standard 2.0: Structure and Properties of Matter**

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
				2.4.5 Observe and describe that different objects and materials may be composed of parts that are too small to be seen without magnification.	System of Particles
					Properties and Composition

# **Physical Science**

Content Standard 3.0: Energy and Matter: Interactions and Forms—Students understand that changes in temperature and pressure can alter states of matter. Energy exists in many forms, and one form can change into another.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		W 3.2.1 Describe an object as hot or cold.	3.3.1 Describe how hot or cold an object is by expressing its temperature. M 3.3.3		Heat and Temperature
	3.1.2 Observe and describe materials in different states (i.e. solids and liquids).	3.2.2 Investigate and describe how objects can change state (e.g., melting ice cube).	3.3.2 Investigate and describe how solid ice can melt and liquid water will disappear if allowed to stand in an open container.		Changes of State
		I 3.2.3 Investigate and describe how sound can be produced by vibrating objects and how it has different properties (e.g., high-low, soft-loud).			Waves

#### Content Standard 3.0: Energy and Matter: Interactions and Forms

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
				3.4.4 Investigate and describe how <b>circuits</b> can produce light, heat, sound, and magnetic effects.	Circuits
					Changes in Energy
					Descriptions of Energy and Order

**Circuit** – (electrical circuit) – an assembly of electrical parts.

# **Physical Science**

Content Standard 4.0: Chemical Reaction—Students understand that chemical reactions change substances into different substances.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Conservation of Matter
					Rates of Chemical Reactions
					Transformation of Matter and Energy
					Chemical Properties

# **Physical Science**

**Content Standard 5.0: Nuclear and Electromagnetic Energy**—Students understand that nuclear energy and electromagnetic energy are produced from both natural and human-made sources in many forms.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Behaviors of Light
					Nuclear Applications
					Nuclear Wastes
					Electromagnetic Energy
					Nuclear Structures and Processes
					Nuclear Energy

# **Life Science**

**Content Standard 6.0: Structure and Function**—Students understand that all life forms, at all levels of organization, use specialized structures and similar processes to meet life's needs.

By the end of <b>Kindergarten</b> , students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
6.K.1 Observe and describe animal attributes.	6.1.1 Observe and describe plant attributes.	E 6.2.1 Investigate and describe how living things grow and change.	6.3.1 Investigate and describe how plants and animals have life cycles and require food, water, air, and space.		Life Cycles and Disruptions
6.K.2 Compare and contrast how humans and animals use their senses.	6.1.2 Use the five senses to investigate the natural world.	W 6.2.2 Distinguish living from non-living things using established criteria.	I 6.3.2 Investigate, compare, and contrast identifiable characteristics of plants and animals.	6.4.2 Investigate, compare, and contrast identifiable structures of plants and animals.	Structures, Functions, and Systems
			6.3.3 Investigate and describe how plants and animals require certain conditions to survive.		Environment, Energy, and Cellular Functions
					Control of Cellular Functions

# Life Science Content Standard 7.0: Internal and External Influences on Organisms—Students understand that organisms respond to internal and external influences.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
			7.3.1 Investigate and describe how various living things behave differently under diverse conditions.	7.4.1 Investigate and describe the behavior of individual organisms when influenced by internal cues (e.g. hunger) and by external cues (e.g. environment).	Influences on Behavioral Patterns
					Origins of Behavioral Patterns
					Stimulus and Behavior
		7.2.4 Explain that some diseases are caused by germs and some are not; diseases caused by germs may be spread by people who have them.	7.3.4 Explain that if germs are able to get inside one's body, they may keep it from working properly.		Disease

**Germs** – A microscopic disease-causing organism.

Life Science
Content Standard 8.0: Heredity and Diversity—Students understand that life forms are diverse, and that they pass some characteristics to their offspring.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
8.K.1 Observe and describe how animals have offspring that are the same kind of animal.	8.1.1 Investigate and describe how particular plants have seeds that produce the same kind of plant.	8.2.1 Investigate and describe how particular animals have offspring that are the same kind of animal.	8.3.1 Investigate and describe how offspring may resemble parents and siblings may resemble each other.		Inherited Traits
8.K.2 Sort animals by observable characteristics.	8.1.2 Sort plants by observable characteristics.	8.2.2 Investigate and describe how some living things look alike and others do not.	8.3.2 Investigate and describe how some living things are alike in their appearance and behaviors; others are not.		Variation and Classification of Organisms
				8.4.3 Observe and describe variations among individuals within the human population.	Variation

# **Content Standard 8.0: Heredity and Diversity**

By the end of Kindergarten, students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Diversity of Species
					Mutations

# **Life Science**

**Content Standard 9.0: Evolution – The Process of Biological Change**—Students understand that life forms change over time.

By the end of <b>Kindergarten,</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
			9.3.1 Explain that many different kinds of living things exist on Earth.		Common Ancestry
			9.3.2 Explain how particular features of plants and animals help them live in different kinds of places.		Natural Selection
					Adaptation
					Evidence for the Theory of Evolution

#### **Content Standard 9.0: Evolution**

By the end of <b>Kindergarten</b> , students	By the end of <b>Grade 1</b> , students know and are	By the end of <b>Grade 2</b> , students know and are	By the end of <b>Grade 3</b> , students know and are	By the end of <b>Grade 4</b> , students know and are	
know and are able to:	able to do everything				
	required in the earlier grade and:	required in earlier grades and:	required in earlier grades and:	required in earlier grades and:	
					Influences on Evolution
					Life Origins

Content Standard 10.0: Earth Structures and Composition—Students understand that the Earth is composed of interrelated systems of rocks, water, air, and life.

By the end of <b>Kindergarten</b> , students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		I 10.2.1 Describe that rocks come in many sizes and shapes and have interesting textures, colors, and patterns.	I 10.3.1 Investigate and describe how the Earth is composed of different kinds of materials (e.g., rocks and soils, water, and the atmosphere).	10.4.1 Investigate, compare, and contrast the properties of rocks and minerals.	Rocks and Minerals
			W 10.3.2 Describe how the Earth is composed of different landforms. G 2.2.1	10.4.2 Compare and contrast the location of landforms.	Landforms
			W 10.3.3 Investigate and describe how the Earth is nearly spherical and covered with more water than land. G 1.2.7		Earth's Structure and Composition

Landform – A large feature on the surface of the Earth, including mountains, volcanoes, canyons, etc.

# **Content Standard 10.0: Earth Structures and Composition**

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
				10.4.4 Investigate and describe the composition of different soils.	Soil
					Earth's Atmosphere
					Geologic Processes and Features

**Content Standard 11.0: Earth Models**—Students understand that the Earth may be represented by a variety of maps and models.

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
			W 11.3.1 Describe that directions on the Earth can be represented by north, south, east, and west. G 1.3.1		Locating Positions on the Earth
			W 11.3.2 Locate the state of Nevada on a national map and their own city on a Nevada state map. G 1.2.8; G 7.3.2		Nevada and the Earth
					Models of the Earth
					Time and Location on the Earth

Content Standard 12.0: Earth History—Students understand that Earth systems (such as weather and mountain formation) change or vary.

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		I 12.2.1 Investigate and describe how changes happen to many things (e.g., weather).  G 2.2.5; G 3.2.1; G 3.12.2; G 5.12.1	W 12.3.1 Investigate and describe how some changes are so slow (e.g., seasons) or so fast (e.g., lightening strikes) that they are hard to see.		Change Over Time
					Relative Geologic Time and the Fossil Record
					Geologic Time
					Age of the Earth and Solar System

Content Standard 13.0: Cycles of Matter and Energy—Students understand that Earth systems have a variety of cycles through which energy and matter continually flow.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		W 13.2.1 Investigate and describe how the sun warms the land, air, and water.	W 13.3.1 Investigate and describe how things that give off light also often give off heat.		Earth Energy Sources
13.K.2 Observe and record weather from day to day.	13.1.2 Observe and record seasonal changes.	I 13.2.2 Investigate and describe how weather changes from day to day and throughout the year.	W 13.3.2 Observe, record, and describe seasonal differences using words, numbers, and drawings. E 11.3.4; M 7.3.7	13.4.2 Identify and describe various meteorological phenomena (e.g. floods, drought)	Weather
			E 13.3.3 Investigate and describe how water can be a liquid or a solid and can go back and forth from one form to the other.	13.4.3 Investigate and describe the forms and uses of water.	Water

# Content Standard 13.0: Cycles of Matter and Energy

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Climate
					The Nature of Change
					Bio-Geochemical Cycles
				13.4.7 Identify the components of our solar system (i.e. planets, moon, asteroids, comets, sun)	Energy Transfer and Transformation in the Earth System
					Earth's Internal Energy

Content Standard 14.0: The Solar System and the Universe—Students understand that the Earth is part of a planetary system within the Milky Way Galaxy, which is part of the known universe.

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		W 14.2.1 Observe and describe the sun, moon, planets, and stars.	W 14.3.1 Identify the sun, moon, and the Earth as components of our solar system.	14.4.1 Observe and describe properties, locations, and movements of the sun, moon, stars, clouds, birds, and planes.	The Solar System
		W 14.2.2 Describe the movement of some of the objects in the sky.		14.4.2 Observe and describe the changes of the moon's appearance over time.	Celestial Motion
			W 14.3.3 Explain that there are more stars in the sky than anyone can easily count.	14.4.3 Investigate and describe how distance affects the brightness of any light source.	Stars and Galaxies

# **Content Standard 14.0: The Solar System and the Universe**

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Origin of the Universe
					Tools and Methods of Astronomy
					Universality of Physical Laws

#### **Environmental Sciences**

**Content Standard 15.0: Ecosystems**—Students will demonstrate an understanding that ecosystems display patterns of organization, change, and stability as a result of the interactions and interdependencies among the life forms and the physical components of the Earth.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
15.K.1 Recognize that animals live in different places.	15.1.1 Recognize that plants grow in different places.	Investigate and describe the roles of plants as producers and animals as consumers and how living things may depend on each other. G 3.2.2  Investigate and describe how animals eat plants or other animals for food and may also use plants or even other animals (for shelter and nesting).	I 15.3.1 Investigate and describe how animals and plants that live in different places have similarities and differences.  G 3.3.1  E 15.3.2 Investigate and describe the interactions of organisms within an ecosystem.	15.4.2 Investigate and describe the variables that affect the survival of organisms within an ecosystem.	Stability and Change in Ecosystems  Relationships and Interactions in Ecosystems
					Cycles of Matter and Energy in Ecosystems
					Characteristics of Ecosystems

**Ecosystem** – A system of relationships between organisms in an environment, and between organisms and the environment.

#### **Environmental Sciences**

**Content Standard 16.0: Natural Resources**—Students demonstrate and understand that natural resources include renewable and non-renewable materials and energy. All organisms, including human, use resources to maintain and improve their existence, and the use of resources can have positive and negative consequences.

By the end of  Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:  W 16.2.1 Investigate and describe how some resources can be used and reused.	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:  W 16.3. Explain that natural resources are used for many purposes. G 5.3.6; G 5.3.7	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:  16.4.1 Identify the natural resources of Nevada.	Renewable and Nonrenewable Resources
		W 16.2.2 Describe the various resources that provide the necessary things that are used by people in their daily lives. G 4.2.6	W 16.3.2 Describe how humans have obtained natural resources for thousands of years through farming, mining, and hunting and gathering. G 5.3.6; G 5.3.7	16.4.2 Investigate and describe resources which can be used and reused or renewed.	Acquisition and Use of Natural Resources
					Traditional and Innovative Uses of Natural Resources

#### **Content Standard 16.0: Natural Resources**

By the end of Kindergarten students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Environmental Consequences of Natural Resource Use
					Technology and Human Population

# **Environmental Sciences**

**Content Standard 17.0: Conservation**—Students understand that humans have the unique ability to change personal and societal behavior based on ethical considerations regarding other organisms, the planet as a whole and future generations.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		W 17.2.1 Describe how people live in different places in different ways.  G 2.2.2; G 4.2.4; G 5.2.4	W 17.3.1 Explain that many materials can be recycled and used again, sometimes in different forms. G 5.3.7		Conservation
		W 17.2.2 Describe how some things in students' daily lives change and other things stay the same.	I 17.3.2 Investigate and describe how patterns of change may be observable and predictable.	17.4.2 Observe, investigate, and describe how some environmental changes occur quickly and some occur slowly.	Systems and Equilibrium
					The Scientific Nature of Environmental Issues
					Responsible Behavior

# The Nature and History of Science

Content Standard 18.0: Scientific, Historical, and Technological Perspectives—Students understand that science is a unique way of knowing about things. Many men and women have contributed to the traditions of science. The ability to pursue activities and careers in science is accessible to people from all cultures and all levels of ability.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:  W  18.2.1  Explain that everybody can invent things and ideas.	By the end of Grade 3, students know and are able to do everything required in earlier grades and:  E 18.3.1 Explain that science is a process that involves observing and asking questions about the natural world and seeking answers to those questions.	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	The Nature of Science
			I 18.3.2 Explain that accurate descriptions in science are important because they enable people to compare their observations with those of others.	18.4.2 Identify the components of scientific investigation (e.g. observing, collecting data, classifying)	Attributes of Scientific Research
			I 18.3.3 Recognize that science engages men and women of all ages and backgrounds. H 3.8.2; H 3.8.4; H 4.8.2; H 5.8.1		The History of Science and Invention

# Content Standard 18.0: Scientific, Historical, and Technological Perspectives

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:  W 18.3.4 Give examples of the benefits of working with a team and sharing findings.	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:  18.4.4 Exchange scientific observations and ideas.	Science as a Collaborative Process
			I 18.3.5 Explain that tools are used to do things better or more easily (e.g. observe, measure, and make things) and to do some things that could not be done at all (e.g. see things that are too small to be seen unaided. Ec 7.2.1	18.4.5 Explain that measuring instruments can be used to gather information for making scientific comparisons of objects and events for designing and constructing things that will work properly.	Technology
					The Dynamic Character of Scientific Knowledge
					Scientific Ethics

# The Nature and History of Science

Content Standard 19.0: Reasoning and Critical Response Skills—Students understand that many decisions require critical consideration of scientific evidence

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Evaluating Data
					Analyzing and Evaluating Benefits and Risks
					Analyzing Systems
					Critical Analysis
					Critical Evaluation

# The Nature and History of Science

Content Standard 20.0: Systems, Models, Risk, and Predictions--Students understand that a variety of models can be used to describe or predict things and events.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
	20.1.1 Use toy models (e.g. miniature cars, toy animals) to explain the things they represent.		W 20.3.1 Compare a <b>model</b> with what it represents (e.g., a model of the Earth to the Earth itself). G 7.3.5		Models
			E 20.3.2 Identify observable patterns and predict future events based on those patterns (e.g. seasonal weather patterns.) M 2.3.1		Models and Predictions
		W 20.2.3 Explain that something may not work if some of its parts are missing.	20.3.3  Demonstrate that when parts are put together, they can do things together they couldn't have done by themselves.		Systems
					Statistical Modeling
					Risk Analysis

**Model** – A physical, graphical, or mathematical representation of a thing or event.

# Scientific Inquiry: Processes and Skills

Content Standard 21.0: Scientific Values and Attitudes—Students understand that science is an active process of systematically examining the natural world.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
21.K.1 Ask questions about the world.	21.1.1 Make observations and give descriptions.	I 21.2.1 Make observations and give descriptions using words, numbers, and drawings. M 7.2.7; M 7.2.18	E 21.3.1 Observe and raise questions about the world, then seek answers through investigation.	21.4.1 Conduct fair tests to make observations.	Scientific Investigations
		I 21.2.2 Record observations of investigations over time in a notebook or journal. (e.g., growth of a plant, changes in weather) G 4.2.1; M 7.2.7	I 21.3.2 Record observations of investigations over time in a notebook or journal. (e.g., changes in an aquarium or terrarium) M 7.3.7		Repeating Scientific Trials
					Generating Multiple Explanations

# Scientific Inquiry: Processes and Skills

Content Standard 22.0: Communication Skills—Students understand that a variety of communication methods can be used to share scientific information.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
		W 22.2.1 Follow verbal instructions accurately.	W 22.3.1 Follow verbal and written instructions to complete a procedure. E 4.3.6; E 8.3.4		Writing and Following Instructions
	22.1.2 Draw pictures that describe observations.	I 22.2.2 Produce simple pictographs to describe observations. G 7.2.3; E 11.2.5; M 7.2.4; M 7.2.7	I 22.3.2 Create illustrations, graphs, and charts to convey ideas and record observations.  G 4.3.1; G 7.3.3; E 11.3.5		Working With Graphical Models
22.K.3 Share information and ideas with others.	22.1.3 Respect ideas and contributions of others.	I 22.2.3 Cooperate and contribute ideas within a group. E 10.2.3	I 22.3.3 Cooperate and contribute ideas within a group. E 10.3.1; E 10.3.3		Working With Others

# Scientific Inquiry: Processes and Skills

Standard 23.0: Scientific Applications of Mathematics—Students understand that scientific inquiry is enhanced and often communicated by using mathematics.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Variables
					Computing
		W 23.2.3 Give rough estimates of numerical answers to problems before calculating. M 1.12.1	W 23.3.3 Give rough estimates of numerical answers to problems before calculating.		Estimating

## **Standard 23.0: Scientific Applications of Mathematics**

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
					Working With Measurements
	23.1.5 Make predictions based on observed patterns.	E 23.2.5 Recognize unexpected or unusual results in activities. M 6.2.4	I 23.3.5 Determine whether measurements and descriptions are reasonably accurate. M 6.3.4		Evaluating Measurements
					Analyzing Data and Solving Problems
					Validity of Samples

# Scientific Inquiry: Processes and Skills

Content Standard 24.0 Laboratory Skills and Safety—Students can appropriately and safely apply the tools and techniques of scientific inquiry.

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
			E 24.3.1 Use equipment properly and safely in all science activities.		Working Safely
					Working With Chemicals
			24.3.3 Identify and gather tools and materials needed in an investigation.		Using Experimental Apparatus

## Content Standard 24.0 Laboratory Skills and Safety

By the end of <b>Kindergarten</b> students know and are able to:	By the end of <b>Grade 1</b> , students know and are able to do everything required in the earlier grade and:	By the end of <b>Grade 2</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 3</b> , students know and are able to do everything required in earlier grades and:	By the end of <b>Grade 4</b> , students know and are able to do everything required in earlier grades and:	
	24.1.4 Record observations.	I 24.2.4 Keep a record of observations and measurements taken over time. M 7.2.7	I 24.3.4 Keep a record of observations and measurements taken over time. E 11.3.4; M 7.3.7	and.	Recording Data
					Writing and Following Laboratory Procedures
					Designing and Conducting Experiments

# **Physical Science**

Content Standard 1.0: Forces and Motion—Students understand that forces such as gravitational, electrical, and magnetic influence the motion of objects.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
I/L 1.5.1 Investigate and describe the relationship that exists between the size of a change in motion of an object to the size of a push or pull on that object. M 7.5.2; M 7.5.8; M 8.5.2; M 9.5.6; M 9.5.3	1.6.1 Investigate and describe the concept that some objects move so slowly or so rapidly that their motion is difficult to detect.	1.7.1 Investigate and describe the effect of retarding forces such as friction on the motion of objects.	I/S 1.8.1 Investigate and describe that multiple forces acting on an object along a straight line affect the motion of an object.  M 7.8.2; M 9.8.3	E/S 1.12.1 Investigate and describe how changes in motion are based on the laws of motion <sup>3</sup> .	Description of Motion
I/L 1.5.2 Investigate and describe that objects usually move downward when they fall or are released in the air or on ramps.		1.7.2 Investigate and describe the gravitational relationship that exists between the masses of objects and how far apart they are.	E/S 1.8.2 Describe the force (gravity) which makes objects fall and planets move in their orbits.	I/L 1.12.2 Explain that the <b>force of attraction</b> that exists between two masses is inversely proportional to the square of the distance between them. M 2.12.3; M 2.12.5; M 6.8.1 M 9.12.3; M 9.12.6; M 1.12.2; M 7.12.9; 6.12.1; 6.12.4	Gravity

Law – A statement about a natural event or series of events that is always true under certain conditions; can be used to make reliable predictions about nature.

**Laws of Motion** –A set of laws that describe relationships among force and motion;

**Gravity** – The attractive force between any two objects;

**Force of Attraction** – A pull between two objects (i.e., gravity and electrostatic attraction).

<sup>&</sup>lt;sup>3</sup> Words in bold text are defined at the bottom of each page. Nevada Science Standards, Adopted March 1998, September 1, 2001 Edition

#### **Content Standard 1.0: Forces and Motion**

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  W/L  1.5.3  Investigate and describe that objects may move in a variety of ways (e.g., straight lines or by rotating, rolling, or revolving).	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:  1.6.3 Investigate and describe how machines can use motion to do work.	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  I/S  1.8.3  Investigate and describe that certain physical principles are used in the design and function of simple machines.	By the end of Grade 12, students know and are able to do everything required in previous grades and:  I/L  1.12.3  Investigate and describe that the usefulness of a simple machine such as a wheel or axle is based on its function, mechanical advantage, and efficiency.	Machines
W/L 1.5.4 Classify objects by whether they sink or float in air or water.	1.6.4 Investigate and describe the relationship between the mass and the volume of various objects.	1.7.4 Investigate and describe the <b>density</b> of solids, liquids, and gases.	I/S 1.8.4 Investigate and describe that buoyancy changes the apparent weight of an object immersed in a fluid.  M 2.8.2; M 9.8.3	I/L 1.12.4 Investigate and describe the relationship that exists between force, pressure, and area in general, and between pressure and depth in liquids. M 7.12.2; M 9.12.3; M 9.12.6; M 2.12.3; M 6.12.1; M 6.12.4; M 7.12.9	Pressure, Density, and Buoyancy

**Mechanical Advantage** – The degree to which a machine makes work easier by decreasing either the force or distance needed to move something. **Efficiency**- Determines how close a machine is to operating without the loss of energy due to friction.

**Density** –The relationship that exists between mass and volume of an object. A cube of styrofoam has less density than an equal–size cube of rock. **Pressure** – Force per unit of area.

## **Content Standard 1.0: Forces and Motion**

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous	
grades and:	grades and:	grades and:	grades and:	grades and:	
I/L 1.5.5 Investigate and describe the ways that magnets attract and repel each other and certain kinds of other materials.			I/S 1.8.5 Investigate and explain that electric current produces magnetic forces, and moving magnets produce electric forces in <b>conductors</b> .	W/L 1.12.5 Investigate and explain that magnetic forces are related to electric forces and can be thought of as different aspects of a single electromagnetic force. (e.g., electric motors, generators, radios).	Electrical and Magnetic Forces

**Conductor** – A material that carries a force such as metal carries heat or electricity. **Electromagnetic Force** – The unified force of electricity and magnetism.

### **Physical Science**

**Content Standard 2.0**: **Structure and Properties of Matter**—Students understand that materials have distinct properties which depend on the amount of matter present, its chemical composition, and structure.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  I/S 2.5.1 Separate mixtures based on their properties.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of Grade 7, students know and are able to do everything required in previous grades and:  2.7.1 Investigate and describe the differences between homogeneous and heterogeneous mixtures.	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  E/S  2.8.1  Use simple models to explain observed properties of matter (e.g., use a particle model to account for the states of matter).	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  E/S 2.12.1 Investigate and describe intrinsic (color, odor, density) and extrinsic (e.g., size, mass, volume) physical properties of matter. M 3.12.2; M 3.12.5; M 6.12.1; M 9.12.7	Physical Properties
I/L 2.5.2 Describe and classify matter in terms of elements, compounds, and mixtures.			E/S  2.8.2  Separate <b>substances</b> based on their physical and chemical properties (e.g., color, solubility, <b>chemical reactivity</b> , melting point, boiling point).	W/L 2.12.2 Explain that substances can be identified on the basis of specific energies given off or taken in by that substance.	Chemical Analysis

Homogeneous Mixtures – A mixture in which all of the components are evenly distributed, with no visible distinct parts; examples include salt water and air.

Heterogeneous Mixtures – A mixture in which the components are unevenly distributed, and may be seen to separate into two or more distinct parts; examples include salad dressing, sand and iron filings, and smoke in air.

**Intrinsic Property** – A characteristic of a sample of material related only to the quality of the material itself and not on the amount of material present; examples include density, color, odor, and hardness.

Extrinsic Property – A property of material that depends on the amount of material present, for example, mass, length, and volume.

 ${\bf Substance}-{\bf The\ class\ of\ homogeneous\ matter\ made\ up\ of\ elements\ and\ compounds}.$ 

Chemical Reactivity – Indicates how likely a substance is to undergo change to a new substance.

## **Content Standard 2.0: Structure and Properties of Matter**

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
W/L 2.5.3 Investigate and describe the ways that solids remaining after a solvent has been evaporated may form distinctive patterns of crystals.			I/S 2.8.3 Use models or drawings to explain how atoms may join together to form molecules or large groups of molecules.	I/S 2.12.3 Explain how atoms may bond with one another by transferring or sharing electrons that are farthest from the nucleus.	Chemical Bonding
	2.6.4 Explain that all <b>matter</b> is composed of atoms, and atoms are composed of smaller particles.	2.7.4 Describe atomic structure by using various historic models of the atom.	E/S 2.8.4 Explain that all atoms are made up of protons, neutrons, and electrons.	W/L 2.12.4 Explain that the electromagnetic force between the nucleus and electrons holds the atom together.	Atomic Theory

**Matter** – Anything that has mass and takes up space.

E/S 2.5.5 Investigate and describe how materials can be broken down physically into smaller and smaller pieces, and that each piece may retain its same properties.			I/S 2.8.5 Explain that liquids, solids, and gases are systems of particles.	I/S 2.12.5 Explain the properties of phases of matter in terms of the <b>kinetic molecular theory</b> and forces of attraction between particles.	System of Particles

**Kinetic Molecular Theory** – A theory stating that all material is made of tiny particles that are in constant motion; this provides a model that is useful for describing why states of matter have their particular properties and behaviors.

**Theory** – An explanation or model based on observation, experimentation, and reasoning; especially one that has been tested and confirmed as a general principle helping to explain and predict natural events.

## **Physical Science**

**Content Standard 3.0**: **Energy and Matter: Interactions and Forms**—Students understand that changes in temperature and pressure can alter states of matter. Energy exists in many forms, and one form can change into another.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  I/L  3.5.1  Investigate and describe how warm objects cool and cool objects warm when they are put together, until they reach the same temperature.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  E/L  3.8.1  Investigate and describe how heat moves from one object to another at different rates, depending on what the objects are made of and whether they are touching each other.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  E/S 3.12.1  Explain that the transformation of energy usually results in some energy in the form of heat, which spreads by radiation, conduction, and sometimes convection into cooler places.	Heat and Temperature
E/S 3.5.2 Investigate and describe how energy can be used to bring about changes in matter (e.g., melting an ice cube).			E/S 3.8.2 Investigate and describe how all phase changes are accompanied by changes in energy.	I/L 3.12.2 Investigate and describe how pressure may affect changes of state.	Changes of State

## Content Standard 3.0: Energy and Matter: Interactions and Forms

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
I/S 3.5.3 Investigate and describe how vibrations produce sound.		3.7.3 Investigate and describe that forms of energy can travel in waves (e.g. seismic, light, radio, tv).	J/S 3.8.3 Investigate and describe how waves transfer energy and move at different speeds in different materials.	I/S 3.12.3 Investigate and describe how waves can superimpose on one another, bend around corners, reflect off surfaces, be absorbed by materials they enter, and change direction when entering a new material.	Waves

**Superimpose** – To place or lay over or above something.

## Content Standard 3.0: Energy and Matter: Interactions and Forms

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  I/S 3.5.4 Describe how electrical components are utilized in the design of simple electrical circuits.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:  3.6.4 Investigate and describe how electrical energy can be transferred through various materials.	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  I/S 3.8.4. Investigate, create, and describe parallel, series, and combination circuits.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  I/L 3.12.4 Describe the properties of electrical circuits in terms of moving electrons, conductivity, resistance, and electrical potential energy.	Electrical Circuits
	3.6.5 Investigate and describe how energy exists in different forms (e.g. heat, light, chemical, electrical, and others).		E/S 3.8.5 Investigate and describe how energy may be transferred into or out of a system or object in many ways and readily changes forms.	E/L 3.12.5 Investigate and describe how matter and energy may be changed and energy can be transferred in many ways, but the entire mass-energy budget of the universe remains constant.	Changes in Energy

**Mass-Energy Budget** – The total amount of energy in the universe.

## Content Standard 3.0: Energy and Matter: Interactions and Forms

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
grades and			E/S 3.8.6 Identify the energy involved in a particular process as potential (energy of position and stored chemical energy) or kinetic (energy of motion).	W/L 3.12.6 Investigate and describe how systems tend to become less ordered over time.	Descriptions of Energy and Order

#### **Physical Science**

Content Standard 4.0: Chemical Reaction—Students understand that chemical reactions change substances into different substances.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  I/L  4.5.1  Investigate and describe how observable changes in matter may occur when different materials are heated, mixed, or cooled.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  E/S  4.8.1  Investigate and describe how in <b>chemical</b> reactions, the total mass is conserved and the elements involved do not change into other elements.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  I/S  4.12.1  Investigate and describe how, in chemical reactions, elements combine in predictable ratios, and the numbers of <b>atoms</b> of each element do not change.	Conservation of Matter
	4.6.2 Investigate and describe how chemical reactions may be fast or slow.		E/S 4.8.2 Investigate and describe how the rate of a chemical reaction can be influenced by variables such as temperature, <b>pH</b> , and light.	E/S 4.12.2 Investigate and describe how chemical reaction rates depend on conditions in the reacting system, the properties of reacting materials, and the presence of certain rateregulating chemicals.	Rates of Chemical Reactions

**Chemical Reaction** – The process in which substances change into other substances. This occurs at the level of atoms and molecules. **Atom** – The smallest part of a chemical element which can take part in a chemical reaction.

**pH** – A measure of the degree to which a substance is an acid or a base.

## **Content Standard 4.0 Chemical Reaction**

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  E/S  4.8.3  Investigate and describe how materials may give off heat or light when they react chemically with each other.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  I/S  4.12.3  Investigate and describe how chemical reactions may release or consume energy.	Transformation of Matter and Energy
			E/S 4.8.4 Predict common properties of elements using the Periodic Table.	I/L 4.12.4 Relate the chemical properties of an element to the outermost electrons of an element.	Chemical Properties

#### **Physical Science**

**Content Standard 5.0**: **Nuclear Energy and Electromagnetic Energy**—*Students understand that nuclear energy and electromagnetic energy are produced from both natural and human-made sources in many forms.* 

By the end of <b>Grade 5</b> ,	By the end of <b>Grade 6</b> ,	By the end of <b>Grade 7</b> ,	By the end of <b>Grade 8</b> ,	By the end of Grade 12,

## **Life Science**

**Content Standard 6.0: Structure and Function**—Students understand that all life forms, at all levels of organization, use specialized structures and similar processes to meet life's needs.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  E/S 6.5.1 Investigate, compare, and contrast the different life cycles of different living things.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  W/L 6.8.1 Explain how disease is a breakdown in structures or functions of an organism due to intrinsic system failures or damage caused by infection.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  W/S 6.12.1 Explain how disease disrupts the <b>equilibrium</b> that exists in a healthy organism.	Life Cycles and Disruptions
E/S 6.5.2 Investigate, compare, and contrast the different structures of organisms that serve different functions for growth, reproduction, and survival.			E/S 6.8.2 Investigate and describe how multicellular living things have tissues, organs, and organ systems that are specialized to perform life functions.	I/S 6.12.2 Explain how the human body has a specialized anatomy and physiology composed of an hierarchical arrangement of differentiated cells.	Structures, Functions, and Systems

**Equilibrium** – Balance, as between two opposing forces.

**Differentiated Cells** – Cells which have become modified and specialized within an organism.

## **Content Standard 6.0: Structure and Function**

By the end of <b>Grade 5</b> ,	By the end of <b>Grade 6</b> ,	By the end of <b>Grade 7</b> ,	By the end of <b>Grade 8</b> ,	By the end of <b>Grade 12</b> ,

Plant Structures and Functions
			I/S 6.8.6 Explain how information used to guide cellular functions is stored in <b>DNA</b> . H 10.8.1		Control of Cellular Functions

**Photosynthesis** – The process by which plants make their food from air and water using energy from the sun. **DNA** –The genetic material of all cells and many viruses; DNA stands for deoxyribonucleic acid.

Life Science
Content Standard 7.0: Internal and External Influences on Organisms—Students understand that organisms respond to internal and external influences.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  W/L 7.5.1  Investigate and describe how clues for behavior may be detected by the senses in humans and other living things.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  I/L 7.8.1 Explain how behavior may be innate or learned.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  I/L 7.12.1 Investigate and describe how some broad patterns of behavior exhibited by animals have evolved to ensure survival of the species.	Influences on Behavioral Patterns
I/L 7.5.2 Investigate and describe how some organisms can learn from their experiences.			7.8.2 Explain how an organism's behavior is based on experience and on the species' evolutionary history.	E/L 7.12.2 Investigate and describe how plant and animals have mechanisms that allow them to respond to changes in their environment.	Origins of Behavioral Patterns
I/L 7.5.3 Investigate and describe how some environmental conditions are more favorable than others to living things.			I/L 7.8.3 Investigate and describe how behavior is one kind of response an organism can make to an internal or environmental stimulus.	I/L 7.12.3 Investigate and describe how multicellular animals have nervous systems that receive input through sensory organs and generate behavioral responses.	Stimulus and Behavior

#### Content Standard 7.0: Internal and External Influences on Organisms

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
			E/S 7.8.4 Explain how various viruses, bacteria, fungi, and parasites may infect the human body and interfere with normal body functions.	I/L 7.12.4 Explain how certain viral diseases make the body vulnerable to multiple infectious agents and cancerous cells by destroying critical cells of the immune system.	Disease

Virus – Any of a large group of disease-producing agents that are smaller than bacteria, are composed of DNA and an outer core of protein, and are dependent upon living cells for their reproduction and growth.

**Bacteria** – A large group of microscopic organisms that multiply by splitting or by growing from spores. They come in a variety of forms and though some may cause diseases, many are important in human processes .

Fungi – Plantlike organisms that lack chlorophyll and absorb their food from dead or living organisms (i.e., yeast, mushrooms, and molds).

Parasites – An organism that lives on another "host" organism from which it gets its food, examples include ticks and tapeworms.

Viral Disease - Diseases caused by viruses including AIDS, rabies, measles, polio, chicken pox, and the common cold.

Life Science
Content Standard 8.0: Heredity and Diversity—Students understand that life forms are diverse, and that they pass some characteristics to their offspring.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  I/L 8.5.1 Investigate and describe how some characteristics between offspring and parents are inherited, but other characteristics are learned.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  E/S 8.8.1  Explain how heredity is the passage of genetic instructions from one generation to another.	By the end of Grade 12, students know and are able to do everything required in previous grades and:  E/S 8.12.1 Explain how all body cells in an organism are developed from a single cell and contain essentially identical genetic instructions. Explain how different parts of the instruction are used in different kinds of cells.	Inherited Traits
I/L 8.5.2 Explain how living things may be classified on the basis of similar features, behaviors, and/or habits.			I/L 8.8.2 Classify organisms on the basis of similar characteristics, and explain the basis for such a classification system.	W/L 8.12.2 Explain how relatedness among organisms can be estimated from the similarity of their DNA sequences.	Variation and Classification of Organisms

#### Content Standard 8.0: Heredity and Diversity

By the end of <b>Grade 5</b> ,	By the end of <b>Grade 6</b> ,	By the end of <b>Grade 7</b> ,	By the end of <b>Grade 8</b> ,	By the end of Grade 12,

grades and:					
		8.7.7 Explain how the experiences an organism has during its lifetime can affect it.	8.8.7 Explain how changes in the genes of sex cells can affect offspring.	8.12.7 Explain how gene mutations may be caused by a variety of influences, when mutations occur in sex cells, they can be passed on to offspring.	Mutations

Mutation – A change within a gene of an organism that results in a new characteristic that can be passed on to offspring.

Life Science
Content Standard 9.0: Evolution: The Process of Biological Change—Students understand that life forms change over time.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  E/S  9.5.1  Classify animals and plants according to their physical characteristics.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  W/L  9.8.1  Explain that millions of species of animals, plants, and microorganisms are alive today.	By the end of Grade 12, students know and are able to do everything required in previous grades and:  E/S  9.12.1  Investigate and describe the basic idea of the theory of biological evolution is that through genetic and/or environmental influences the Earth's present-day species developed from earlier, distinctly different, but common ancestors.	Common Ancestry
I/L 9.5.2 Investigate and describe how environmental changes allow some plants and animals to survive and reproduce, but others may die.			E/S 9.8.2 Investigate and describe how biological evolution provides a scientific explanation for the differences and many similarities between species.	I/S 9.12.2 Explain the <b>fossil</b> record of ancient life forms by applying the idea of natural selection and its evolutionary consequences.	Natural Selection

**Evolution** – The process by which all living organisms have developed from earlier forms through modification of characteristics in successive generations. **Fossil** –Any evidence of life from a previous geological age, including petrified bones or plant parts, and imprints.

#### **Content Standard 9.0: Evolution**

				the Earth.	
			G 3.8.1	the Burth.	

**Greenhouse Effect** – Heat insulating effect that some gases such as carbon dioxide, water vapor, and methane have on the Earth's atmosphere. **Geothermal** – Relates to the internal heat of the Earth.

**Tectonic** – Relates to the action of forces that cause deformities in the Earth's crust.

## **Earth and Space Sciences**

Content Standard 14.0: The Solar System and the Universe—Students understand that the Earth is part of a planetary system within the Milky Way Galaxy, which is part of the known universe.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  I/L  14.5.1  Investigate and describe the basic components of our solar system (e.g., planets, moons, asteroids, comets, and the sun).	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  W/L  14.8.1  Investigate and describe the size, composition, and surface features of the planets in our solar system.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  W/L  14.12.1  Investigate and describe how the Earth's atmosphere, water, temperature, and composition compare with conditions on other planets.	The Solar System
I/L 14.5.2 Describe the apparent motion of celestial objects across the sky.			E/S 14.8.2 Investigate and describe how seasons, eclipses, moon phases, and tides are caused by the effects of relative motion and positions of the sun, Earth, and moon.	E/S 14.12.2 Explain how most objects in the solar system are in regular and predictable motion which explains such phenomena as the day, the year, phases of the moon, and eclipses.	Celestial Motion
W/L 14.5.3 Describe how the stars in the sky are not scattered evenly, and they are not all the same in brightness or color.			W/L 14.8.3 Explain that billions of galaxies form most of the visible mass in the universe.	W/L 14.12.3 Explain how stars produce energy and elements heavier than hydrogen from nuclear reactions.	Stars and Galaxies

## **Content Standard 14.0: The Solar System and the Universe**

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  W/L  14.12.4  Explain that on the basis of scientific evidence, the universe is estimated to be about ten billion years old.	Origin of the Universe
			I/L 14.8.5 Explain how various tools (e.g., optical and radio telescopes, unmanned robotic spacecraft) allow us to investigate objects in the sky that are too distant, faint, or bright to observe directly from Earth. M 9.8.5; H 10.8.1	W/L 14.12.5 Describe how increasingly sophisticated technology (e.g., mathematical models and computer simulations) is used to learn about the universe.  M 9.12.5; M 9.12.7	Tools and Methods of Astronomy

## **Content Standard 14.0: The Solar System and the Universe**

			G 3.8.3; G 3.8.4	G 3.12.1; G 3.12.3	

**Bio-diversity** – The number and variety of different organisms in the region in which they occur.

## **Content Standard 15.0: Ecosystems**

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  E/S  15.5.3  Explain how the sun is the primary source of energy for nearly every ecosystem and that living things get what they need to survive from their environments.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  E/S  15.8.3  Investigate and describe how the major energy source in most ecosystems is sunlight which is converted by producers into chemical	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  E/S  15.12.3  Investigate and describe how materials and energy are cycled and recycled through ecosystems via pathways known as food webs.	Cycles of Matter and Energy in Ecosystems
I/L 15.5.4 Investigate and describe how the local ecosystem has unique characteristics.			energy. G 3.8.3  I/L  15.8.4  Describe how geographically distinct ecosystems on the Earth have similarities and differences.  G 3.8.3; G 3.8.4	I/L 15.12.4 Describe the unique geologic, hydrologic, climatic, and biological characteristics of Nevada's bioregions. (e.g. Northern NV cold desert, Southern low warm desert, Mountain). G 3.12.1	Characteristics of Ecosystems

**Bioregion** – A geographical region that is characterized by very general shared ecological qualities.

#### **Environmental Sciences**

**Content Standard 16.0: Natural Resources**—Students demonstrate and understand that natural resources include renewable and non-renewable materials and energy. All organisms, including human, use resources to maintain and improve their existence, and the use of resources can have positive and negative consequences.

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
I/L 16.5.1 Investigate and describe how resources have distinct properties which determine their usefulness. Ec 6.5.1	grades and.	grades and.	E/S  16.8.1  Investigate and describe the identifying characteristics of renewable and non-renewable resources.  G 5.8.6	I/L  16.12.1  Evaluate the consequences of changing patterns of resources use.  Ec 6.12.2; G 3.12.3; G 5.12.1; G 5.12.6; G 5.12.7	Renewable and Nonrenewable Resources
W/L 16.5.2 Investigate and describe how technology can be used to extend resources (e.g., recycling).			E/S 16.8.2 Explain how some natural resources are limited in their abundance and/or accessible location (e.g. water in the desert).  Ec 6.8.3; G 4.8.6; G 5.8.2; H 3.8.5	W/L  16.12.2 Investigate and describe the various processes involved in obtaining, using, and recycling materials such as wood products, minerals, food, and manufactured objects. ## The Nature and History of Science

Content Standard 18.0: Scientific, Historical, and Technological Perspectives— Students understand that science is a unique way of knowing about things. Many men and women have contributed to the traditions of science. The ability to pursue activities and careers in science is accessible to people from all cultures and all levels of ability.

By the end of <b>Grade 5</b> ,	By the end of <b>Grade 6</b> ,	By the end of <b>Grade 7</b> ,	By the end of <b>Grade 8</b> ,	By the end of Grade 12,	
students know and are	students know and are	students know and are	students know and are	students know and are	
able to do everything	able to do everything	able to do everything	able to do everything	able to do everything

grades and:	grades and:	grades and:	grades and:	grades and:	
E/L 18.5.1 Explain that science is a systematic way of exploring the world.			E/S 18.8.1 Explain that scientific investigations involve the use of logic, respect for the rules of evidence, openness to criticism, and public reporting of methods and procedures.  C 5.8.6	W/S 18.12.1 Explain that the scientific way of knowing uses a critique and consensus process (e.g., peer review, openness to criticism, logical argument, skepticism).  E 1.12.3; E 11.12.1; E 11.12.2	The Nature of Science
E/S 18.5.2 Develop explanations using observations (evidence) from investigations.			I/L 18.8.2 Explain that scientific inquiry done in a school setting is similar to what scientists do.	W/L 18.12.2 Investigate and explain how research emphasis is influenced by economic and public policy. E 1.12.3	Attributes of Scientific Research

## Content Standard 18.0: Scientific, Historical, and Technological Perspectives

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:  W/L  18.5.3  Describe key scientists, classical experiments in science, and technological inventions that lead to a better understanding of the impact of science on society.	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:  18.7.3 Investigate and describe how people create models to explain the world as scientific knowledge has increased, and that these models are modified or discarded.	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:  I/L  18.8.3  Explain, using examples, that ancient peoples provided knowledge about the natural world that is still regarded as valid today, even though that knowledge may not have originated by scientific methods.	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:  W/L  18.12.3  Investigate and explain how scientific innovations that were originally challenged are now widely accepted.  E 1.12.3	The History of Science and Invention
W/L 18.5.4 Recognize and explain that science is an activity done by more than one person working together.			E/L 18.8.4 Explain that scientists may work in teams and some may work alone, but all communicate extensively with each other.	W/L 18.12.4 Explain that scientists work with others to resolve differences in interpretation of observations. E 1.12.3	Science as a Collaborative Process

## Content Standard 18.0: Scientific, Historical, and Technological Perspectives

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
W/L 18.5.5 Explain that technology enables scientists and others to study the motion of objects that are moving rapidly or that are hardly moving at all.	18.6.5 Identify and describe various technological tools that scientists use to help them do their work.		W/L 18.8.5 Explain that scientific inquiry and technological design have similarities and differences. Scientists propose explanations for questions about the natural world and engineers propose solutions relating to human problems, needs, and aspirations.	W/L 18.12.5 Explain that technological problems create a demand for new scientific knowledge and new technologies which make it possible for scientists to extend their research in new ways or to undertake entirely new lines of research.  M 6.12.13; M 6.12.14; E 1.12.3	Technology

## Content Standard 18.0: Scientific, Historical, and Technological Perspectives

By the end of <b>Grade 5</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 6</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 7</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 8</b> , students know and are able to do everything required in previous grades and:	By the end of <b>Grade 12</b> , students know and are able to do everything required in previous grades and:	
E/S 18.5.6 Explain that science is an ongoing process of investigation (inquiry).			E/S 18.8.6 Explain that scientific knowledge is revised through a process of incorporating new evidence gained through continual investigation.	W/L 18.12.6 Explain that scientific knowledge builds on previous information, and rarely are entire theories completely discarded in favor of new ones. E 1.12.3	The Dynamic Character of Scientific Knowledge
			I/L 18.8.7 Identify and describe how science is subject to strengths and limitations related to other human social and intellectual activities.	W/L 18.12.7 Explain that scientists have ethical procedures, violations of which have consequences.  E 1.12.3	Scientific Ethics

## The Nature and History of Science

Content Standard 19.0: Reasoning and Critical Response Skills—Students understand that many decisions require critical consideration of scientific evidence.

By the end of <b>Grade 5</b> ,	By the end of <b>Grade 6</b> ,	By the end of <b>Grade 7</b> ,	By the end of <b>Grade 8</b> ,	By the end of Grade 12,

#### **Glossary for Science**

**Atom** The smallest part of a chemical element which can take part in a chemical reaction.

**Bacteria** A large group of microscopic organisms that multiply by splitting or by growing from spores. They come in a variety of forms and

though some may cause diseases, many are important in human processes.

**Bio-diversity** The number and variety of different organisms in the region in which they

occur.

**Bioregion** A geographical region that is characterized by very general shared ecological qualities.

**Chemical Reaction** The process in which substances change into other substances. This occurs at the level of atoms and molecules.

**Chemical Reactivity** How likely a substance is to undergo change to a new substance.

**Circuit (electrical circuit)** An assembly of electrical parts.

**Conductor** A material that carries a force such as metal carries heat or electricity.

**Constructive Forces** Processes such as the collection of lithosphere plates or volcanic eruptions which raise the surface of the Earth.

**Density**The relationship that exists between mass and volume of an object (i.e., cube of styrofoam has less density than an equal –size cube of

rock).

**Destructive Forces** Processes such as blowing wind or running water that lower the surface of the Earth.

**Differentiated Cells** Cells which have become modified and specialized within an organism.

**DNA**The genetic material of all cells and many viruses; DNA stands for deoxyribonucleic acid.

**Dynamic Equilibrium** A state of balance in which two opposing processes are occurring at equal rates.

**Ecosystem** A system of relationships between organisms in an environment, and between organisms and the environment.

**Efficiency** How close a machine is to operating without the loss of energy due to friction.

**Electromagnetic Force** The unified force of electricity and magnetism.

**Electromagnetic Spectrum** The entire range of different types of electromagnetic waves, including visible light, X-rays, and radiowaves.

**Electron** Negatively charged particle in an atom.

**Equilibrium** Balance, as between two opposing forces.

**Evolution** Biological evolution – the process by which all living organisms have developed from earlier forms through modification of

characteristics in successive generations.

**Extrinsic Property** A property of material that depends on the amount of material present, for example, mass, length, volume.

**Force** Any push or pull.

**Force of Attraction** A pull between two objects (i.e., gravity and electrostatic attraction).

**Fossil** Any evidence of life from a previous geological age, including petrified bones or plant parts, and imprints.

**Fossil Fuels** A fossil material that can be burned such as coal, petroleum, and natural gas.

Fungi Plantlike organisms that lack chlorophyll and absorb their food from dead or living organisms (i.e., yeast, mushrooms, and molds).

**Germs** A microscopic organism which can cause disease.

**Gravity** The attractive force between any two objects.

**Greenhouse Effect** Heat insulating effect that some gases such as carbon dioxide, water vapor, and methane have on the Earth's atmosphere.

**Geological Features** Something found on the surface or interior of the Earth which has formed from geologic processes such as mountains, canyons,

earthquakes, faults, rocks, minerals, etc.

**Geothermal** Relates to the internal heat of the Earth.

**Heterogeneous Mixtures** A mixture in which the components are unevenly distributed and may be seen to separate into two or more distinct parts; examples

include salad dressing, sand and iron filings, and smoke in the air.

**Homogeneous Mixtures** A mixture in which all of the components are evenly distributed, with no visible distinct parts; examples include salt water and air.

**Intrinsic Property** A characteristic of a sample of material related only to the quality of the material itself and not on the amount of material present;

examples include density, color, odor, and hardness.

**Kinetic Molecular Theory** A theory that all material is made of tiny particles that are in constant motion; this provides a model that is useful for describing why

states of matter have their particular properties and behaviors.

**Landform** A large feature on the surface of the Earth, including mountains, volcanoes, and canyons, etc.

**Laws of Motion** Also called Newton's Laws of Motion; a set of laws that describe relationships among force and motion.

**Lithosphere** The solid portion of the Earth, including the crust and upper mantle.

**Mass-Energy Budget** The total amount of energy in the universe.

**Matter** Anything that has mass and takes up space.

**Mechanical Advantage**The degree to which a machine makes work easier by decreasing either the force or distance needed to move something.

**Model** A physical, graphical, or mathematical representation of a thing or event.

**Mutation** A change within a gene of an organism that results in a new characteristic that can be passed on to offspring.

**Nuclear Reaction** A change in the nucleus of an atom. Some nuclear reactions can result in the transfer of a tremendous amount of energy.

**Nucleus (atomic)** The central region of an atom which contains more than 99% of the atom's mass.

**Parasites**An organism that lives on another "host" organism from which it gets its food, examples include ticks and tapeworms.

**pH** A measure of the degree to which a substance is an acid or a base.

**Photosynthesis** The process by which plants make their food from air and water using energy from the sun.

**Pressure** Force applied per unit of area.

**Properties** Characteristics unique to a particular set of living or nonliving things.

**Radioactive Dating**The use of clock-like rate of decay of radioactive isotopes to determine the age of something.

**Radioactive Isotopes** Very large atoms of elements that are unstable and undergo nuclear reactions to form new elements.

**Selective Breeding**An artificial process by which only organisms possessing a particular characteristic are allowed to breed and produce offspring with

that trait.

**Substance** The class of homogeneous matter made up of elements and compounds.

**Superimpose** To place or lay over or above something.

**Tectonic** Relates to the action of forces that cause deformities in the Earth's crust.

**Theory** An explanation or model based on observation, experimentation, and reasoning; especially one that has been tested and confirmed as a

general principle helping to explain and predict natural events.

Viral Disease Diseases caused by viruses including AIDS, rabies, measles, polio, chicken pox, and the common cold.

**Virus**Any of a large group of disease-producing agents that are smaller than bacteria, are composed of DNA and an outer core of protein,

and are dependent upon living cells for their reproduction and growth.
